Maryann Mweru Wambui

DATA ANALYST | DATA ENGINEER | BUSINESS INTELLIGENCE DEVELOPER

mwerumaryann@gmail.com | +254 792 498 427 | Nairobi, Kenya | github.com/mmweru

PROFILE

Data professional with a computer science foundation, blending data analysis, business intelligence, and data engineering fundamentals. Experienced in auditing and reconciling large-scale relational data, building automated reporting and data pipelines in Python and SQL, and creating interactive dashboards in Power BI and Tableau. Growing expertise in modern data engineering tools including PySpark, Azure Databricks, and cloud-based data warehousing, applied alongside a strong SQL foundation across PostgreSQL, MSSQL, and T-SQL. Comfortable collaborating cross-functionally with product, QA, and engineering teams to translate business needs into reliable data pipelines and reporting outputs.

SKILLS

Data Engineering	PySpark, Azure Databricks, Data Warehousing, ETL/ELT Pipeline Design, Data Modeling, Batch & Automated Data Processing
Reporting & Analytics	Custom Report Building, Trend & Pattern Analysis, Exploratory Data Analysis (EDA), Statistical Analysis, Data Cleaning & Validation, Data Reconciliation, Root-Cause Error Analysis
System Auditing	System Data Auditing, Accuracy & Duplication Management, Compliance-Oriented QA Checks
Visualization	Power BI (DAX, Power Query), Tableau, Excel, Interactive Dashboards, Corporate Reporting, Data Storytelling
Excel & Google Sheets	Pivot Tables, Advanced Formulas, VLOOKUP/XLOOKUP/INDEX-MATCH, Power Query, Data Modeling
Programming & Databases	SQL (T-SQL, PostgreSQL, MSSQL), Python, PySpark, Git, Azure, Azure Databricks, Snowflake
Business & Cross-Functional Collaboration	Translating Business Needs into Data Requirements, Stakeholder Communication, Process Automation Collaboration, Cross-Functional Agile Teams
Soft Skills	Creative & Strategic Thinking, Self-Motivated, Analytical Problem Solving, Attention to Detail

PROFESSIONAL EXPERIENCE

Software Developer — Safaricom PLC Contract

- Ran structured data quality checks across multiple internal data sources, identifying trends and resolving discrepancies before they reached downstream business reporting.
- Audited data across relational systems to guarantee accuracy and manage duplication, strengthening trust in the metrics relied on by decision-makers.
- Collaborated cross-functionally with the Product Owner, QA, and backend engineering teams to translate business requirements into reliable data pipelines and reporting outputs, optimizing querying logic across large PostgreSQL and MSSQL datasets.

Software Developer — ONA Kenya Mar 2023 – Sep 2023

– Audited health information system records to identify inconsistencies and duplication, applying a root-cause approach that strengthened data reliability for programme reporting.
– Interpreted raw field and production data to surface trends supporting stakeholder decision-making, then built automated data pipelines and Python validation scripts to keep outputs clean, structured, and consistent across sources.

Android Trainer (Volunteer) — Google & ACAT Jan 2024 – June 2024

– Trained community learners with varying technical backgrounds on Android app development fundamentals, translating technical concepts into plain, accessible language.
– Prepared and delivered structured training materials and hands-on coding exercises for participants.
– Supported learners through debugging and foundational programming concepts, strengthening communication and coaching skills.

Projects

Power BI Sales Performance Dashboard
View Project
Problem: Stakeholders had no single view for comparing performance across products and cities, making top and bottom performers and profit trends hard to spot. **Solution:** Built an interactive Power BI dashboard comparing net sales, quantity, and profit, with top 5/bottom 5 product rankings on each metric, a city-level net sales map, and slicers for on-demand filtering. **Tools:** Power BI, DAX, Power Query.

Airbnb Market Price Analysis Dashboard (Tableau)
Tableau Public Visualization
Problem: Short-term rental pricing and room-distribution data needed to be comparable across locations to support pricing and performance decisions. **Solution:** Built an EDA dashboard synthesizing geolocation, pricing, and seasonal booking data into a polished multi-view Tableau report. **Tools:** Tableau. **Impact:** Enabled geographic performance comparisons through custom filters and a clear visual hierarchy — directly analogous to comparing performance across routes, stations, or business units.

COVID-19 Data Exploration & Analytics (SQL)
GitHub Repository
Problem: Raw global pandemic datasets spanned multiple tables with inconsistent string-formatted fields, making trend analysis unreliable. **Solution:** Used advanced SQL (T-SQL) window functions, multi-table JOINs, CTEs, and conditional calculations, engineering an optimized temp table (`#PercentPopulationVaccinated`) with safe casting (`TRY_CONVERT`) to clean raw inputs. **Tools:** T-SQL, SQL Server. **Impact:** Built a production-ready database view for direct BI tool connections and ongoing reporting.

Certifications

Google Data Analytics Certificate	View Certificate
Crash Course on Python (Google)	View Certificate
Using Python to Interact with the Operating System (Google)	View Certificate
Introduction to Git and GitHub (Google)	View Certificate

Education

Bachelor of Science in Computer Science, Second Class Upper Honours
Moi University, Kenya
